Claims 1, 3-7, 9-11, 13, 14, 16-23 and 28-35 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The applicants argue that their invention is "homogeneous" as compared to the Abend reference used in the previous rejection. Abend states that his invention is nonhomogeneous according to his definition "that homogeneous means that the concentration of components in one mm<sup>2</sup> doesn't deviate by more than 2 % from the average value within the entire mixture." The applicants have failed to set forth any definition of homogeneity, and they argue that this is a critical difference between their claimed invention and the adhesive of Abend. They further don't specify how to obtain homogeneity. In their examples, they don't specify how the components are mixed and they don't specify polyisocyanate particle sizes that would enable homogeneity. Hawley's Condensed Chemical Dictionary, Eleventh Edition, doesn't help in setting forth a precise definition. It states that no mixture is truly homogeneous, but that the word is often loosely used to describe uniformly dispersed mixtures. Hawley doesn't specify what "uniform" means.

Claim 11 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Claim 1 already contains the same limitation to homogeneity as this claim contains.
